

MDX40Downgrader is a software to downgrade a MDX-40A to MDX-40.  
This installs the Booter ver.130 and the firmware ver.190.  
For downgrading, it is necessary to downgrade both the booter and the firmware.

Get the machine in "updating mode".  
While keeping pressed [TOOL UP] and  
[TOOL DOWN] buttons, turn ON the main

When in "updating mode", [SCANNING]  
led blinks slowly.

It takes about 10 seconds to install the  
booter.  
When [SCANNING] changed to lighting  
from blinking, it means the completion of the

If the machine is not in  
updating mode, this shows

This message shows up after the  
completion of booter installation (after  
10 seconds).

Turn OFF the main power.

Get the machine in "updating mode".  
While keeping pressed [TOOL UP] and  
[TOOL DOWN] buttons, turn ON the main

When the machine is not in  
"updating mode", this shows up

It takes about 50 seconds to install the  
firmware.  
When [SCANNING] changes to lighting from

When selecting [Cancel] button,  
this message shows up.

This shows up after 50 seconds.
