## ROLAND RAPID CUSTOM MANUFACTURING IS THE PERFECT FIT FOR TODAY'S MEDICAL MANUFACTURING INDUSTRY

Imagine a tool that lets you make completely custom products for any patient, from a wide range of FDA-approved materials.

A single machine able to scale with your growth, from prototype to full production. One that is flexible and easy enough to operate without expensive technicians or software. And affordable enough to add additional machines as production increases, at a fraction of the cost of large CNC mills. This is the thinking behind Roland Rapid Custom Manufacturing (RCM) solutions, a modular approach to help companies grow profitably. Using an assembly line of Roland MDX-540 milling machines, AlloSource is quickly manufacturing custom spinal implants used in spine fusion surgeries. These devices produce highly detailed parts with smooth surface finishes and tight tolerances, while allowing them to customize their designs on a case by case basis.

That's the kind of flexibility and support every business needs.
