

## ***PhotoGraV* Comparison on black brass.**

---

As you can see, the real engraving shown below matches closely the *PhotoGraV* simulation. Before *PhotoGraV*, you could not inspect the final product without actually engraving it, a costly and time consuming process.

Further, without *PhotoGraV*'s simulation capability, the effect on the final engraving of any adjustments to the image are difficult to predict. Simulation is a powerful tool that saves you valuable time and materials.

**Actual Engraving**
