

# Chalong Achawakorn

Jewellery Design Instructor, Thailand 

Jewellery is an arts or mini sculpture that we can carry to everywhere we need. At first, I never think about machine to make my Jewellery output. I am specializing in model making with modeling wax with carving tool that I make my own.

But now, I am wrong. Some design of jewellery need very fine details and more accuracy work that cannot do or it is very difficult to do with hand carving. So I decided to install Roland 3D milling machine that can help me to make my good jewellery and some of arts object that has larger size. With my Roland, it helps me save time to work and increase my productivity and efficiency. Now I am so much happy and satisfied with my work with my Roland.
