

FEEL THE COLOR

(If we had printed this on the VersaUV, you could.)

INTRODUCING THE REVOLUTIONARY VersaUV THE WORLD'S FIRST UV INKJET PRINTER/CUTTER

Take one look at a finished print and the innovation is clear. Across a vast range of substrates, the environmentally-friendly new VersaUV prints vibrant CMYK *plus* White *plus* Clear Coat and automatically contour cuts. It's ideal for proofs, label and packaging prototypes and short production runs. You can also print directly onto synthetic and natural leathers, fabrics, window coverings and other interior décor items. Then add Clear Coat for remarkable special effects ranging from high-gloss finishes and area highlights to dimensional effects such as faux leather, crocodile skin and even Braille. Because it can print directly onto offset stock, the VersaUV is also a cost-effective alternative for proofing and pre-press.

Every aspect of our UV technology is innovative. Our ECO-UV inks are instant drying and can be stretched across curved surfaces *without* cracking. The curing system uses safe, low heat lamps that are ready to use instantly and last up to ten times longer than conventional UV lamps. But seeing (and feeling) is really believing. So request a sample print today...and feel the color.
