The VersaUV LEF-12 Benchtop UV Flatbed Printer

**Need a job done yesterday?** The VersaUV LEF-12 benchtop UV flatbed printer turns your ideas into reality in minutes. Perfect for short-runs, personalization and prototypes, Roland's unparalleled UV technology lets you avoid set-up costs and print directly on a vast array of substrates, including three-dimensional promo items up to 3.94" thick. White ink can be added as a spot color, or a flood behind CMYK to make colors pop on dark backgrounds or clear materials. The addition of Clear Coat ink produces enhanced visual and tactile effects such as gloss or matte finishes and embossed logos.

For a free sample, call (800) 542-2307, or visit [www.rolanddga.com/lef](http://www.rolanddga.com/lef).

Imagine.  Roland®
