

20200415 Official Launch of the New Roland VersaUV LEF2-300D Flatbed UV Printer

New Edition to the LEF2 series Features Expanded Workspace to Allow for Direct Printing on an Even Wider Variety of Items

Wednesday, April 15, 2020: Roland DGA announces the launch of its new VersaUV LEF2-300D flatbed UV printer. With the focus of business shifting to e-commerce due to the current health crisis, this product introduction is especially timely and relevant. The LEF2-300D offers those selling their wares online a way to differentiate themselves from the competition by personalizing or customizing their products. With its expanded workspace that supports a height of up to 7.87 inches (200 mm) – twice that of standard LEF2 models – this innovative, versatile benchtop device allows users to direct-print detailed text and full-color graphics onto an even broader range of objects.
